PROFESSIONAL SUMMARY

Computer Science undergraduate with hands-on experience in data science, predictive analytics, backend systems, and cloud technologies. Proficient in Python, SQL, ML frameworks, and Azure cloud services. Adept at building analytical solutions, automating MRO/maintenance workflows, and creating dashboards that surface actionable insights. Eager to apply logical, analytical, and innovative thinking to real-world engineering challenges in an agile environment.

EDUCATION

B.Tech in Computer Science — SR University

Warangal, Telangana — 2023 – 2027

- *Coursework: Data Structures & Algorithms, DBMS, Operating Systems, Distributed Systems, Machine Learning, Software Engineering*

EXPERIENCE

AI/ML Educational Program – Participant ▶ — Google Developers

2024

- Completed curriculum covering supervised & unsupervised learning: regression, classification, clustering, and dimensionality reduction.
- Implemented and fine-tuned ML models using Python, PyTorch, and TensorFlow; evaluated with F1-score, ROC-AUC, precision/recall metrics.
- Gained practical exposure to model deployment pipelines and best practices in ML engineering.

PROJECTS

Adaptive Stock Trading System ▶ — Python • SQL • ETL Pipelines

2025 – Present

- Designed ETL pipelines for ingesting, cleaning, and processing real-time and historical financial market data from multiple sources.
- Built backtesting engine with risk-adjusted metrics (Sharpe ratio, max drawdown, annualized returns); visualized performance via custom dashboards integrated with SQL databases.
- Implemented scalable, modular trading logic with configurable strategy layers and clean separation of concerns in backend architecture.

AI Agent Automation Framework ▶ — Python • REST APIs • Async Systems

2024 – Present

- Built modular backend for multi-step workflow automation using AI agents – directly applicable to MRO, maintenance scheduling, and equipment health monitoring.
- Implemented REST-based orchestration with dynamic task routing, retry logic, parallel execution, logging, and agent state management.
- Leveraged Python async patterns to optimize throughput and minimize latency in agent pipeline execution.

TECHNICAL SKILLS

Languages: Python, Java, SQL, JavaScript, Shell Scripting, C# (learning)

ML / Data: PyTorch, TensorFlow, Scikit-learn, Pandas, NumPy, Predictive Modeling, Statistical Analysis

Cloud & Tools: Azure AI, Azure Databricks (learning), AWS, Docker, Git, Power BI (learning), Tableau (learning)

Systems: MySQL, PostgreSQL, MongoDB, Elasticsearch, REST APIs, Microservices, Linux, Distributed Systems

CERTIFICATIONS

- Microsoft Certified – Azure AI Fundamentals ▶ [[Microsoft](#)]
- AWS Academy Graduate – Cloud Foundations ▶ [[AWS](#)]
- Software Engineering Essentials ▶ [[IBM / Coursera](#)]
